

Certifiable ISMS in accordance with TISAX

for automotive suppliers

The VDA recommends that all companies in the supply chain establish information security in accordance with TISAX and have it independently certified. Depending on the field of activity, e.g., when handling prototypes, additional requirements apply.

Individual consulting and support for your TISAX certification.

OUR APPROACH

We ensure a holistic preparation of your assessment

- Information security status check
- Training of the project team and coaching of security officers
- Selection of suitable tools for your workflows
- Support with the initial implementation or version update
- Focus on the seamless integration of the system into daily operations
- Conduction of an internal pre-audit for assessment preparation

OUTCOME AND VALUE

Certifiable ISMS according to TISAX

- Assessment of information security in your company
- Established internal security organization
- Training certificates for involved personnel
- Information security risk management
- Pre-audit report and action plan (ready-for-assessment)
- Foundation for modern, powerful, and secure IT

Systematic approach to TISAX certification – secure and efficient

Andreas Grau
Head of Cybersecurity at Consileon

WHY CONSILEON

Consileon is your partner for information security in the automotive industry: Our TISAX-based ISMS approach combines deep expertise with IT excellence and meets the highest standards in data protection, risk management, and auditability.

Our cybersecurity expert will be happy to advise you.
